

NShield System Recovery Software

Key Features

- Recover previously stored backups of host PC hard drive
- Software-only solution is simple and easy to install/setup
- Supports Windows 2000, XP and Media Center
- Selective recovery from multiple hard drive partitions
- Autorun feature restores systems in under 2 minutes
- Automatic Task Setup can schedule PC refreshes
- Selective Partition Protection lets administrators assign varying levels of protection to different hard drives

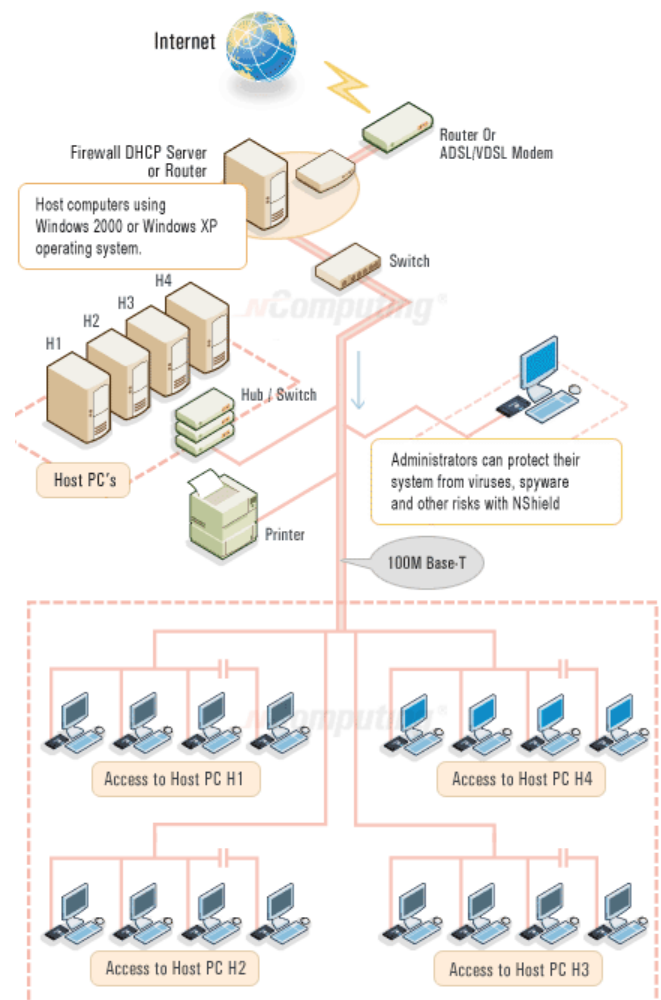

Overview

NShield is an innovative system recovery tool, which enables you to recover a previously stored backup of your host PC's hard disk via a manual or automatic reboot of the protected PC. Complicated manuals, complex configuration software or expensive storage solutions are not required. NShield recovers your applications, Windows system settings and data easily and within just a few minutes. Even viruses, spyware, failed software installations, un-installations or damage to the Windows OS files are no longer a problem, because after every reboot your PC is reset to a known-good state. This solution is ideal for schools and public access applications where user changes are to be temporary.

Configuration

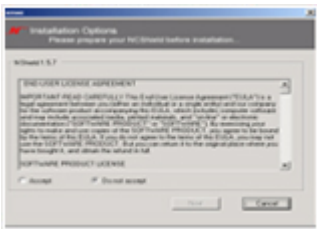

NShield consists of three software components:

- Windows Setup Program:** Installation is easy so any user can create a backup partition of their operating system. NComputing offers a 30-day trial release. Once satisfied, you can activate your installation online to run the unlimited full version.
- NShield Windows Management Software:** This integrated suite allows administrators to maintain a PC's hard disk with multiple partitions and operating systems. With an intuitive graphical interface any technician can administer the software.
- NShield Management Software (BIOS-Mode):** The BIOS-Mode Management Software is used to configure NShield before the operating system starts. This mode enables easy backups and restores without recovery CDs or special hardware.

Example Configuration

NShield System Recovery Software Features

FEATURES	
Key Features	▪ Supports any PC or notebook ▪ Software-only product (no special backup hardware requirements) ▪ Selectively recover or save the data on different hard drive partitions ▪ Autorun recovery of data on each protected hard disk in under two minutes ▪ Automatic Task Setup can refresh your PC according to your preferred frequency ▪ Selective Partition Protection enables users to flexibly modify the protection modes of different hard drives ▪ High security through real-time monitoring of the CMOS data on the computer main board ▪ Complies with and is compatible with most anti-virus software
Licensing	Via a single serial number. Free trial version can be used for 30-days after which activation (online) is required.
Software Components	1. Installation Program:  2. Management Software:  3. BIOS-Mode Software: 
SYSTEM REQUIREMENTS
